# Standard Products Guide

Sorbothane® is a proprietary, visco-elastic polymer. Visco-elastic means that a material exhibits properties of both liquids (viscous solutions) and solids (elastic materials). Sorbothane® combines shock absorption, good memory, vibration isolation and vibration damping characteristics. In addition, Sorbothane® is a very effective acoustic damper and absorber. While many materials exhibit one of these characteristics, Sorbothane® combines all of them in a stable material with a long fatigue life.

- » Sorbothane® has a low creep rate compared to other polymers (rubber, neoprene, silicone, etc.)
- » Sorbothane® has a superior damping coefficient, over a very wide temperature range, compared to any other polymer.
- » Unlike fluid-based shock absorbers or foam products, Sorbothane® absorbs shock efficiently for millions of cycles.
- » Sorbothane® eliminates the need for metal springs to return the system to its equilibrium position after absorbing a shock.

## CUSTOM SOLUTIONS

If an appropriate isolator cannot be found among the standard products, Sorbothane also manufactures a host of custom isolators. Additionally, you may make isolators yourself using standard sheet stock. See the stock sheet section or contact the factory for further information at [support@sorbothane.com](mailto:support@sorbothane.com).

## ELECTRONICS

This catalog shows “industrial-sized” isolators for loads in pounds, hundreds of pounds and thousands of pounds. Sorbothane is widely used to isolate delicate electronics – printed-circuit boards, LCD's, disk drives and other small devices. Space is always tight in these applications.

## SHOCK ABSORBERS

In vibration, the wrong design can make matters worse than before. In shock absorption, even a little can improve performance. Consult the factory on your shock applications.

## ACOUSTICS

The Sorbothane hemispheres are world-famous mounts for audio equipment. In addition, where space is tight, thin sheets of Sorbothane, with or without Pressure Sensitive Adhesive (PSA) can convert a noisy design into a very quiet success.

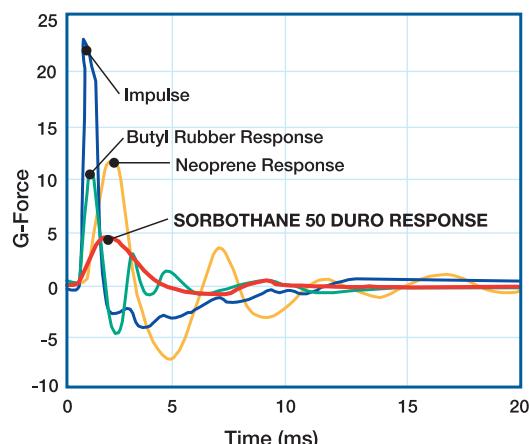

## GASKETS

Sorbothane is a popular material for gaskets because of its chemical resistance, its ability to conform to irregular surfaces, its low creep and its reusability. Its natural tackiness makes it easy to install. Gaskets can be made by you from sheet stock or produced at our factory.

## STEPS FOR SELECTING A SORBOTHANE® ISOLATOR

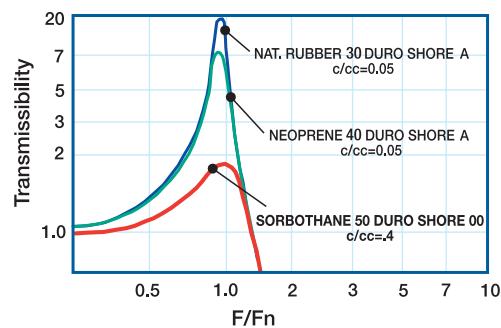

- 1.** Determine the load (weight) of the unit that requires isolation. Divide the weight of the system by the number of isolators to be used. This is the load per isolator. Evenly applied across entire pad.
- 2.** Determine the lowest critical frequency (excitation frequency) of the system. For example: RPM of the motor, rate at which a cylinder strokes, output speed of a speed reducer. Divide minute-based information, such as RPM, by 60 to convert to Hertz (cycles per second).
- 3.** Select an appropriate isolator by using the information charts supplied with each product. Generally, an appropriate isolator will create a system natural frequency at least one-third lower than the excitation frequency. For instance, if the source of the vibration is an 1800 RPM motor, then the excitation frequency is  $1800/60 = 30$  Hertz. The natural frequency of the isolator should be 20 Hertz or less.
- 4.** Select the isolator that meets the technical and physical requirements of your system. In addition to a part number, you must also specify the durometer of the Sorbothane part required to get the specified load rating. Do not oversize isolators. Oversized isolators raise the natural frequency and reduce the effectiveness. Sorbothane's standard color is black. Other colors are available for special orders.
- 5.** Remember: A bad design can actually make things worse for vibration damping. Consult the factory if you are having problems.
- 6.** Remember: Sorbothane works best in compression. If you have a tension application, bushings or a custom variation of the bushings are your best options.

## CONTROLLING SHOCK

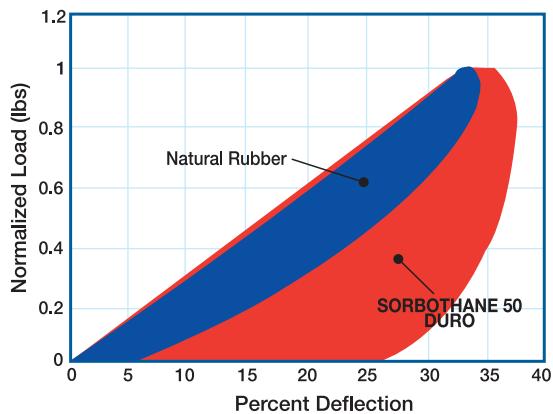

Time Delay Effect of Impulse (Shock) Response of Selected Materials

## CONTROLLING VIBRATION

Ratio of Excitation Frequency to Natural Frequency

## IMPACT ABSORPTION

Hysteresis (Mechanical Energy converted to heat each cycle)

## Durometer

Durometer is a measurement of relative stiffness and is used to compare polymers.

Sorbothane is softer than rubber and most other polymers.

Sorbothane is measured on the Shore "OO" scale.

Most types of rubber and other polymers are specified using the Shore "A" or Shore "D" scales. In comparing stiffness, be aware of the scale being used for the material in question.

The hardness comparison values listed are approximate and should only be used as a guide.

## Shape Factors

Shape Factor is a term of art used in the design of elastomer products. It has the virtue of being an easily developed mathematical expression. It quantifies the unique ability of elastomers to react to an applied force by bulging at 90 degrees to the direction of application of the force.

A "high" shape factor indicates a minimal ability to deform. A "low" shape factor indicates a soft material with a high ability to deform. Implicit in a low shape factor is a low spring rate and the capability to have a low natural frequency.

The Shape Factor is calculated by developing the ratio of the average contact surface (one side) divided by the perimeter area. As such, it can be developed for any shape that can be mathematically described. However, a few standard shapes cover over 90% of all needs.

Product properties developed using the Shape Factor methodology have a nominal accuracy of +/-15%. More precise product properties require physical testing or Finite Element Analysis (FEA).

## Calculating Deflection / Natural Frequency / Spring Rate

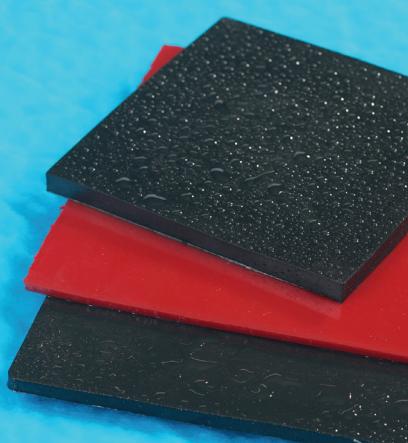

Sorbothane, Inc. offers a printable Engineering Design Guide PDF available at [sorbothane.com](http://sorbothane.com). The guide is available to assist engineers with a practical, hands-on approach to designing with Sorbothane®.

In addition to the printable guide, three interactive Engineering Design "Calculators" can be found on the Sorbothane website - <https://www.sorbothane.com/engineering-design-guide.aspx>. These calculators cover Load Ratings, Vibration Response and Impact Response for working with both Sorbothane and Water-Resistant Sorbothane. As always, the Sorbothane Engineering Team is ready to assist with any project.

## Shore Hardness Scale Comparison Chart

| A   | B  | C  | D  | O  | Sorbothane® |
|-----|----|----|----|----|-------------|
| 100 | 85 | 77 | 58 |    |             |
| 95  | 81 | 70 | 46 |    |             |
| 90  | 76 | 59 | 39 |    |             |
| 85  | 71 | 52 | 33 |    |             |
| 80  | 66 | 47 | 29 | 84 | 98          |
| 75  | 62 | 42 | 25 | 79 | 97          |
| 70  | 56 | 37 | 22 | 75 | 95          |
| 65  | 51 | 32 | 19 | 72 | 94          |
| 60  | 47 | 28 | 16 | 69 | 93          |
| 55  | 42 | 24 | 14 | 65 | 91          |
| 50  | 37 | 20 | 12 | 61 | 90          |
| 45  | 32 | 17 | 10 | 57 | 88          |
| 40  | 27 | 14 | 8  | 53 | 86          |

# Bushings & Washers

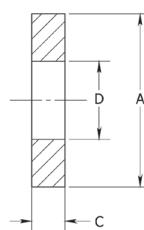

Sorbothane® Bushings are designed to isolate vibration and absorb shock. Using two bushings together or a bushing and washer(s), you can create a floating bolt that isolates the unit from any metal-to-metal contact. Different durometers allow for different spring rates. Load ratings assume a 10%-20% deflection of the material. This deflection is achieved by a combination of system weight and torquing of the connecting bolts. Do not over torque the bolts as this defeats the intended vibration isolation and shortens bushing life. Use a high-quality (thread deforming) lock nut. Bushings may be used in tension connections.

## BUSHINGS

| PART NUMBER   | DIMENSIONS |      |      |      |      | DURO | RATED LOAD (lbs) | NOTES |
|---------------|------------|------|------|------|------|------|------------------|-------|
|               | A (DIA)    | B    | C    | D    | E    |      |                  |       |
| 0576170-30-10 | 0.72       | 0.50 | 0.15 | 0.28 | 0.22 | 30   | 3 - 8            |       |

Sorbothane® meets or exceeds the following compliance policies:

- ROHS • REACH • PROP 65 • Conflict Materials • Latex Free

# Isolation Hemispheres

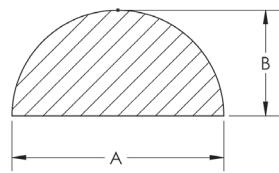

Custom Colors Available

Sorbothane® Hemisphere mounts provide a quick, cost-effective method of isolating bench equipment, small machinery and audio equipment.

Place the hemisphere under the unit to be isolated with the curved surface up. Expect a 20 to 30% deflection when statically loaded. Under loading will result in poor isolation. All sizes are available with Pressure Sensitive Adhesive (PSA).

## HEMISPHERE

### TYPICAL APPLICATIONS:

- » Audio Equipment
- » Video Components
- » Computer & Electronic Devices
- » Sensitive Testing Instruments
- » Small Machinery

# HEMISPHERE

with PSA

## AGGRESSIVE PRESSURE SENSITIVE ADHESIVE

Double coated tape with adhesive features a thin polyester film for dimensional stability and improved handling. The adhesive provides exceptional temperature and chemical resistance and withstands tough application environments. Firm application pressure, and the amount of adhesive-to-surface contact, combines to develop superior bonding strength.

**HEMISPHERE**  
*with Urethane Coating  
& PSA*

**URETHANE COATING**

The thin urethane coating helps to make the Sorbothane® Hemisphere easier to handle by reducing the amount of natural tack. The coating also reduces surface friction and adds a layer of protection from elements.

Sorbothane®

# Stud Mounts & Bumpers

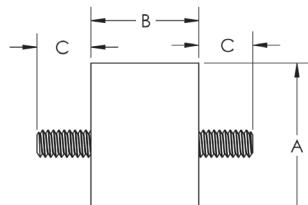

Sorbothane® Stud Mounts, with metal inserts, are available in three standard sizes that utilize both UNC and metric threads. Other UNC and metric threads are available by special order. These Stud Mounts and Bumpers are designed for use in compression.

Use high-quality (thread deforming) lock nuts or double jam nuts to assure your connections do not vibrate loose. High amplitude vibrations require special, heavy-duty inserts. Please consult with the Sorbothane engineering department.

Sorbothane®

# Isolation Rings

Sorbothane® Isolation Rings are ideal for heavy load applications that require shock protection or a low system natural frequency. Typical applications include shipping sensitive hardware, optics and electronics.

Sorbothane®

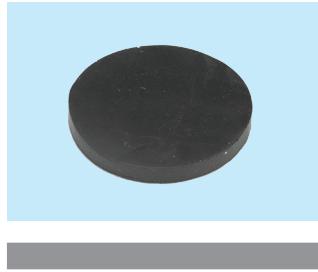

# Isolation Discs

Sorbothane® Isolation Discs can support a wide range of loads. Select the correct thickness, durometer and the number of discs required for the load.

## ISOLATION DISCS

### Round

| PART NUMBER   | DIMENSION        | DURO | RATED LOAD (lbs) | NOTES |

**Sorbothane®**

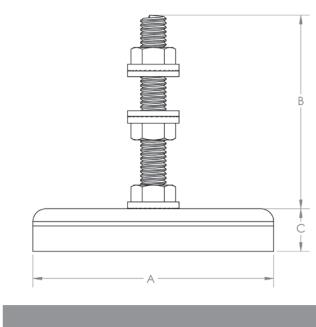

# Anti-Vibration Leveling Mounts

Sorbothane® Anti-Vibration Leveling Mounts provide both leveling and vibration isolation. They are designed to handle a wide range of loads and varying environmental conditions. Major benefits of the mounts include their ability to isolate a system from unwanted vibration and resonance by lowering the natural frequency of the system.

The dual urethane compounds compliment each other to provide a high degree of vibration and shock damping. These mounts provide a quick, cost-effective way to dissipate unwanted energy and correct for machine and floor leveling problems.

## ANTI-VIBRATION LEVELING MOUNTS

## VALUES

**FAMILY** Relationships built on mutual respect and teamwork

**CUSTOMER PARTNERS** Listen first – then collaborate to engineer the best solution

**QUALITY** Excellence – delivered across all platforms

**INTEGRITY** Adherence to a code of moral values and methods

**SERVICE** Striving to meet and exceed all expectations

**Sorbothane®**  
SHOCK & VIBRATION SOLUTIONS

# Sorbothane® Sheet Stock

## CUSTOMIZING SHEET STOCK

### Die Cutting

Sheet Stock up to 0.25-inch thick, with or without PSA can be die cut at additional cost. Die cut materials will have a concave edge. Consult factory on costs.

### Water Jet Cutting

Sheet Stock of any thickness can be water jet cut. Water jet cut materials will have a clean edge. Consult factory on costs.

### Gaskets

Sorbothane is a popular material for gaskets because of its chemical resistance, conformability to irregular surfaces, low creep and reusability. Its natural tackiness makes it easy to install.

Gaskets can be knife-cut, scissor-cut, die cut, molded or water jet cut.

### X-Tra Flex Sheet

X-Tra Flex Sheet is molded with hemispherical bumps. The hemispheres permit the material to flex more easily and allow for soft deformation under load. Overall sheet thickness is approximately 0.185-inch. The hemispheres are approximately 0.09 high and 0.12 diameter. X-Tra Flex sheets are easier to apply to curved and irregular surfaces and provide a softer spring rate.

### Special Sizes, Colors and Thicknesses

The factory can pour special shapes, colors and thicknesses.

#### Available colors include:

BLACK

BLUE

DARK BLUE

RED

ORANGE

GREEN

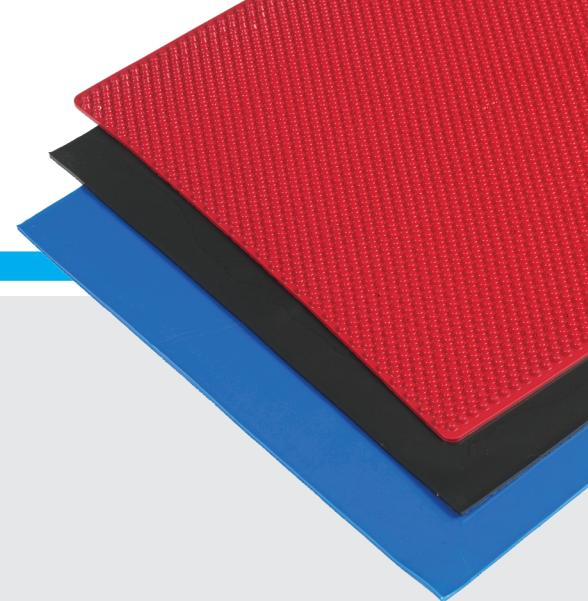

YELLOW

GRAY

Please contact factory for pricing & minimums

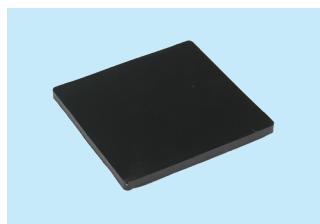

## Sheet Stock for Vibration Applications

In designing your own vibration mounts from sheet stock keep the following in mind:

- **More is not better.** A large, lightly loaded sheet will have a high spring rate and will not deflect enough to provide good isolation. Over compression will lead to short service life. The proper compression range is 3 to 20 percent depending on the "Shape Factor." Shape factor is the ratio of contact surface (one side) divided by perimeter area. See page 5 for calculation of shape factors.
- **Geometry matters.** Small circular pieces and rings "bulge" better than squares and rectangles. "Bulgeability" makes for better isolation. Use many small discs rather than a few large rectangles for best vibration isolation performance.
- **Thickness matters.** The thicker the sheet, the lower the natural frequency. You need a sheet at least one-inch thick to get your natural frequency down to 10 Hertz. (10 Hertz is your target natural frequency for a 900 RPM motor.)
- **Do not "bolt through" your Sorbothane sheet.** The bolt will carry the vibration to the base. Use the natural tackiness of Sorbothane, or apply adhesives to glue the Sorbothane to metal plates on both sides, or consider a custom design with molded-in stud mounts.
- **Use vibration-rated connections.** Where bolted connections are used, use high-quality (thread deforming) lock nuts or doubled jam nuts to prevent connections from vibrating loose.

**Sorbothane®**

# Sheet Stock with PSA

Sorbothane® Sheets with PSA are available in several sizes, thicknesses and durometers. Sheet Stock can be knife-cut, scissor-cut, die cut or water jet cut. The aggressive pressure sensitive adhesive features a thin polyester film for dimensional stability and improved handling. The adhesive demonstrates exceptional temperature and chemical resistance. Firm application pressure and the amount of adhesive-to-surface contact combine to develop a strong bond.

Sorbothane®

# Ergonomic Products

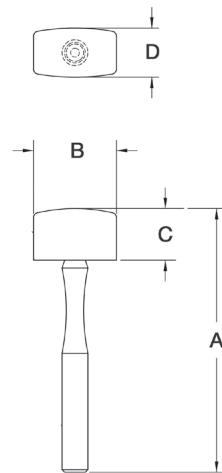

## Soft-Blow Mallet

- No-Denting • No-Marring • No-Jarring

The **Sorbothane® Soft-Blow Mallet** actually conforms to surface irregularities, providing maximum contact without denting or marring surface. Because impact is dissipated within the **Sorbothane®** material - hand jarring and harmful shock - is virtually eliminated. Commonly used for fine woodworking, window installation, remodeling and auto body repair - to name a few.

Three sizes available to fit any job - safe for use on wood, metal, vinyl, tile, glass and plastic.

| PART NUMBER   | DIMENSIONS |      |      |      | DURO | STOCK ITEM | HEAD WEIGHT   |
